TITLE : SPACE EXPERIENCING DEVICE FOR HOUSE

**ABSTRACT :** PROBLEM TO BE SOLVED: To enable a prospective house builder to realize the dimension of a room and the dimension of a three-dimensional space by constituting simulated rooms in which walls and furnitures are arranged and making walls of the simulated rooms movable forward and backward.

**SOLUTION:** A living room L, a dining room D and a kitchen room K are arranged by being properly arranged in this device and since walls restricting dimensions of spaces most in respective simulated rooms exist, the walls are made to be movable forward and backward. That is, in the living room L, a living wall 1 facing to a living window W is constituted to be movable forward and backward by recognizing it to be an important wall restricting the three-dimensional space of the living room L. Moreover, a landscape projecting device 6 projecting the outer landscape of the window W is arranged at the outside of the window W. Thus, the prospective house builder can experience the dimension of the living room L by moving the wall 1 forward and backward with respect to the living window W and also can feel actual dimensions of the living room L and the three-dimensional space by changing the outer landscape.
